

SOME EXAMPLES OF RECOMMENDED VETIVER PLANTING MATERIAL

Paul Truong

Veticon Consulting, Brisbane, Australia

Quality of planting material is one of the most important requirement for successful application of the Vetiver System. The planting unit is normally called “planting slip” and the followings are standard specifications for each slip:

- **Shoot length between 20-30cm**
- **Each slip should have at least 3 actively growing tillers or shoots**
- **Root length of approximately 5cm**
- **Slips can be bare root (no soil) or with soil depending on specification**
- **Attached soil should be weed free**
